

NO. 9

HERE IS THE VERITABLE
ALADDIN'S LAMP

The insurance companies are trusted and willing servants of the people. They are organized without the cost of a dollar to the state. They are operated under state supervision, and there is absolutely no other institution or enterprise that in any way compares with them in their usefulness to the people individually and collectively.

IT MAY NEVER HAVE OCCURRED TO YOU that you are, and that I am, and that the printer who will print this folder is a beneficiary of every insurance company in New Mexico, even though no one of us ever pay a single premium on an insurance policy. Such is the fact, however, and the poorer we are in this world's goods, the more in proportion we will be benefited.

RAILWAY CARS TO BE WEIGHED IN MOTION**EMPLOYES MUST BE POLITE SAYS SANTA FE**

Pennsylvania Adopts Unique Scale Which Will Revolutionize Systems of Other Lines.

J. M. Connell Issues Beautiful Little Bunch of Advice to All Employees Concerning Passengers.

Denver, Colo., March 27.—Unique among scientific methods employed by the Pennsylvania railroad is a scale for weighing cars while in motion, which has just been installed at West Brownsville Junction, Pennsylvania. The new fifty-two foot track scale with mechanical bump, as it is called, has great advantages over existing scales.

The increase in weight of rolling stock, during the last few years, has rendered many track scales incapable of sustaining the heavier loads without serious errors. Probably the most ingenious feature of this new scale is what is called a leveling gear, an arrangement of jacks operated by power, which permits the scale mechanism to be completely disengaged from the track. By reason of this invention the heavier engines can pass over the scale without regressing a pound's weight, the dimension being within the least effort on the balance of the scale.

The increasing wear of the rails, due to the heavy loads, has rendered many track scales incapable of sustaining the heavier loads without serious errors. Probability the most ingenious feature of this new scale is what is called a leveling gear, an arrangement of jacks operated by power, which permits the scale mechanism to be completely disengaged from the track. By reason of this invention the heavier engines can pass over the scale without regressing a pound's weight, the dimension being within the least effort on the balance of the scale.

Wind pressure or snow and ice on the platform will not affect the balance of the new type of scale adopted by the Pennsylvania railroad, the surface platform is supported entirely independently of the scale mechanism.

The design is such that it practically assures immunity from freezing. The "mechanical home" makes it possible to regulate the velocity at which the cars go on to the scale by raising or lowering the apex of the bump, the grade down which the cars run is increased or diminished at will. This is important because on different types of cars the distance between the front and rear wheels varies, and as the weight can only be registered during the interval between the times when the rear wheels pass on to the scale and the front wheels pass off, the velocity must vary inversely with the length of the wheel base.

The installation of the track scale which weighs cars while moving is not one of the many inventions availed of by the Pennsylvania railroad to reduce the cost of operation.

The most common cause of insomnia is disorders of the stomach. Chamberlain's Stomach and Liver Tablets correct these disorders and enable you to sleep. For sale by all druggists.

For the best saddle horses in the city call phone No. 3, W. L. Trimble, 113, N. 2nd St.

Extra large rhubarb roots. Will start growing at once. E. W. Fee.

LOW RATES ARE ANOTHER LIMITED MADE TO EAST FOR SUMMER FOR SANTA FE SYSTEM

Meeting of Officials in California Results in Agreement to Cut Fares and Get Big Traffic.

Los Angeles, Calif., March 27.—At the conference held recently in San Francisco between the heads of the passenger traffic department of the Santa Fe, Southern Pacific, Western Pacific and San Joaquin railroads and the Pacific Coast Steamship and Electric Protective association for the purpose of fixing dates of sale and rates on the annual spring and summer eastern excursions from California to the east the following dates were agreed upon:

May 8 and 9, May 20, June 3 to 10, 13 to 16, 20 to 23, July 1 to 8, 11 to 14, 16 to 22, August 3 to 5, 14 to 17, 21 to 23, 27 to 29, September 3 to 4.

On the dates mentioned first-class trains will be sold to eastern points at a rate of a little more than the usual one-way fare for the round trip, the tickets being three days in every round-trip excursion, plus a day and a half for the return journey, until October 1, 1914.

The rates agreed upon at the conference are substantially less than offering the class of service to which purchasers of these excursion tickets entitled to.

In Denver, Pueblo, Colorado Springs and Colorado mountain points, the bills for the round trip will be sold to Kansas City, Missouri River points and Texas points \$80 to \$85, Louis, \$70 to Chicago \$72.50 to New York city, \$115.50.

Owing to the fact that a number of lines competing on the occasion of these rates have a number of different routes between California and the east, it will be possible for excursionists to secure a way, returning over entirely different routes, a fact which adds great charm to the trip. Besides these regular excursion trains the companies mentioned have arranged a schedule whereby special rates will be made to all large international conventions held in the capital during the coming spring and summer. For instance, special rates will be made to Rochester and return for those wishing to attend the Shriners' convention in that city and to Atlantic City for delegates and visitors to the Presbyterian general assembly to be held there.

According to traffic men on the Pacific coast a much heavier movement than usual to the east on account of these special excursion rates is looked for during the coming spring and summer, and special provisions are being made by all roads to properly handle the traffic. Without doubt, with the keen competition in existence at the present time, each road will provide as comfortable and as safe a means of travel as possible.

The intel men tell us they have had a remarkable good season this winter, but I believe it will never average less. There may be years when it may fall off a little occasionally, but, in general, southern California will always attract the public.
